

IP21/Type 1 option kit for IP20 VLT® drive series

IP21/Type 1 upgrade kits for VLT® HVAC Drive, AutomationDrive and AQUA Drive are now available for the IP20 medium platform drive series.

The kits will be delivered only as separate options and not as integrated parts of the drives.

This option kit will allow customers with IP20 products to comply with IP21/Type 1 and still benefit from advantages available in the IP20 medium platform drive series:

- Reduced size and weight
- Optimised for panel mounting
- Easy installation
- Full range of options
- All performance specifications as existing IP21/Type 1 products
- Price reduction

Both top and bottom covers are required for the drive to comply with IP21/Type 1.

To comply with IP21 alone, only the top part is required.
