

Rationalization of MT / MTZ packaging

With this News we want to inform you about a change in availability of different compressor variants and packaging variants for MT / MTZ compressors.

Currently most MT / MTZ compressors are available in 4 variants "I", "VI", "M" & "VM":

- "I": in single pack (cardboard box); version without oil equalisation, without sight glass
- "VI": in single pack (cardboard box); version with oil equalisation, with sight glass
- "M": in industrial pack (pallet); version without oil equalisation, without sight glass
- "VM": in industrial pack (pallet); version with oil equalisation, with sight glass.

In order to streamline our supply chain and reduce our overall stocks of finished products we will apply the following changes:

- Single packs remain available in variant VI only (variant "I" will be phased-out).
- Compressors with motor codes 6 and 7 remain available in single packs only (industrial packs will be phased out).

These changes represent the current practice. The majority of sales are made in accordance with these changes.

The current variants can be ordered from Danfoss Commercial Compressors until 30/06/2008. After that date, no new orders for the phased-out variants can be processed. The enclosed tables give a full overview of all available MT / MTZ code numbers after 30/06/2008.

MT compressors in industrial pack - R22
