

Danfoss awarded for its Variable Capacity Drive for Refrigeration

Danfoss has won the 2009 AHR Expo Innovation Award Competition. The award is given on behalf of the AHR Expo and its co-sponsors, ASHRAE and AHRI. A panel of Industry Professionals, selected for their knowledge and expertise in HVACR, found the ADAP-KOOL Drive AKD 102 to be worthy of this honor.

The ADAP-KOOL Drive is awarded as the first variable capacity drive with refrigeration terms for refrigeration technicians rather than computer electronics people. A setup “Wizard” and on line manual also simplify work for OEM, installer, and commissioning and service technicians.

The value of the Danfoss ADAP-KOOL Drive lies in its outstanding load-matching capability, meaning better food products, no wasted capacity or energy, and savings for the user—with easy, familiar, and comfortable communication.

Once again, Danfoss met the market with products customised for the specific industry and using the professional terms of this industry.
