### New software release for Danfoss controllers

Danfoss is pleased to announce a new software release for AK2-SC 255 controllers. Concurrently released is a new version of AKA 65 communication software.

Release notes for both of these versions are included with this newsletter.

This new release of AK2-SC 255 software features a new interface to the AK2 and EKC case controller line including:

- 1) The EKC 20X series – used for temperature and defrost control, including fan control and alarm options.
- 2) The EKC 414 – used for single case control with electronic expansion valves.
- 3) The AK2-CC 303 controller – Used for multiple case control with electronic expansion valves.

AK2-SC 255

Coming soon is the release of the Danfoss EKC 167 case display that will also interface with this new software. The EKC 167 is a local display connecting up to 3 sensors to the 255 via a Modbus interface. The display features an LED display that shows case temperature and status. Look for information on this product in an upcoming issue of In Control.

EKC Series Case Controllers

The new version 5.1 AKA65 software is required when communicating with units using version 2.021 and higher. To download both the new version 2.021 controller software and the AKA 65 communication software, go to [www.danfoss.us/foodretail](http://www.danfoss.us/foodretail).

- Click on the software updates and product selection tools
- Click on software updates for supermarket controllers
- You may now download the AKA 65 version 5.1 and the 255 version 2.021 files
- Instructions for updating your programs are included on the web page

Field units can be upgraded using a new software program and cable kit, part number 080Z2162, that can be ordered from Danfoss and contains the program, the necessary cables, and instructions for the upgrade process.

Contact your Danfoss representative for addition information.
